1 point Consider the problem of predicting how well a student does in her second year of college/university, given how well she did in her first year.

Specifically, let x be equal to the number of "A" grades (including A-. A and A+ grades) that a student receives in their first year of college (freshmen year). We would like to predict the value of y, which we define as the number of "A" grades they get in their second year (sophomore year).

Here each row is one training example. Recall that in linear regression, our hypothesis is $h_{\theta}(x)=\theta_0+\theta_1 x$, and we use m to denote the number of training examples.

	x	У
	5	4
	3	4
	0	1
	4	3

For the training set given above (note that this training set may also be referenced in other questions in this quiz), what is the value of m? In the box below, please enter your answer (which should be a number between 0 and 10).

4

1 point 2. Consider the following training set of m=4 training examples:

X	У	
1	0.5	
2	1	
4	2	
0	0	

Consider the linear regression model $h_{\theta}(x)=\theta_0+\theta_1x$. What are the values of θ_0 and θ_1 that you would expect to obtain upon running gradient descent on this model? (Linear regression will be able to fit this data perfectly.)

$$\bigcirc \quad \theta_0=1, \theta_1=1$$

$$\bigcirc \quad \theta_0=1, \theta_1=0.5$$

$$\theta_0 = 0.5, \theta_1 = 0.5$$

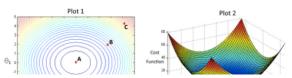

$$\theta_0 = 0.5, \theta_1 = 0$$

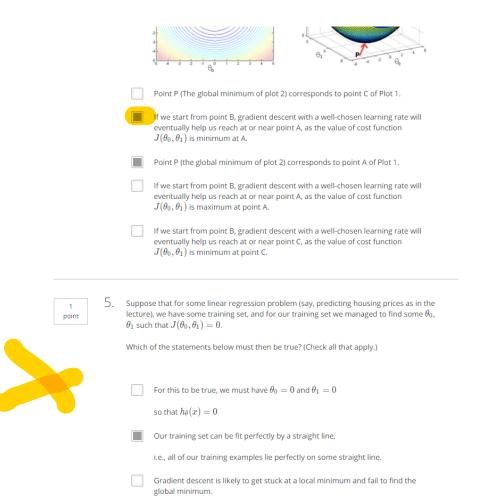

1 point 3. Suppose we set $\theta_0=-1, \theta_1=2$ in the linear regression hypothesis from Q1. What is $h_{\theta}(6)$?

11

1 point 4. In the given figure, the cost function $J(\theta_0,\theta_1)$ has been plotted against θ_0 and θ_1 , as shown in 'Plot 2'. The contour plot for the same cost function is given in 'Plot 1'. Based on the figure, choose the correct options (check all that apply).

Plots for Cost Function $J(\theta_b, \theta_1)$

I, Marin Sarbulescu, understand that submitting work that isn't my own may result in permanent failure of this course or deactivation of my Coursera account.

For this to be true, we must have $y^{(i)}=0$ for every value of $i=1,2,\ldots,m$.
